

# TIGHT BACKSTAGE

Backstage is a new invention from TiGHT. This is a low voltage blue and white light system for your venue. With the profile design of 35X35mm and with lengths of 0.5m and 1m its made to fit small and tight spaces. Together with a wide range of accessories we truly believe that we can meet every single challenge.

Backstage is a product range of indoor bluelight system that stands out when it comes to the lighting quality, richness in accessories and exceptionally good dimming and response curves. Our special designed saturated deep blue color works perfectly during performance while the white bright 5000K light source ensure excellent quality of your work light during change overs, rehearsals, cleaning and so on.

Backstage is a result of market demands and the experience the TiGHT team has gained over many years in the business.

The robust design of the fixture has a pleasant minimalistic look, together with a powerful and strong driver unit that can easily be attached on the wall or be installed in a rack.

Backstage Driver is a powerful driver that can control up to two different zones and up to 10 fixtures per zone. The driver can be controlled with DMX from our 5 pin ports or DMX over network.
